

## MCQ

1 What will be the output of the following code snippet?

```
def func(a, b):  
    return b  
    if a == 0  
else func(b % a, a)  
print(func(30, 75))
```

- a)10
- b)20
- c)15
- d)0

**Answer is C**

2. numbers = (4, 7, 19, 2, 89, 45, 72, 22)

```
sorted_numbers = sorted(numbers)
```

```
even = lambda a: a % 2 == 0
```

```
even_numbers = filter(even, sorted_numbers)
```

```
print(type(even_numbers))
```

- a) Int
- b) Filter
- c) List
- d) Tuple

**Answer is B**

3) As what datatype are the \*args stored, when passed into

- a) Tuple
- b) List
- c) Dictionary
- d) none

**Answer is A**

4) set1={14, 3, 55}  
set2={82, 49, 62}  
set3={99,22,17}

print(len(set1 + set2 + set3))

- a)105
- b)270
- c)0
- d)Error

**Answer is D**

5) What keyword is used in Python to raise exceptions?

- a) raise
- b) try
- c) goto
- d) except

**Answer is A**

6) Which of the following modules need to be imported to handle date time computations in Python?

- a) timedata
- b) date
- c) datetime
- d) time

**Answer is C**

7) What will be the output of the following code snippet?

print(4\*\*3 + (7 + 5)\*\*(1 + 1))

- a) 248
- b) 169
- c) 208
- d) 233

**Answer is C**

8) Which of the following functions converts date to corresponding time in Python?

- a) strptime
- b) strftime
- c) both a) and b)
- d) None

**Answer is B**

9) The python tuple is \_\_\_\_\_ in nature.

- a) mutable
- b) immutable
- c) unchangeable
- d) none

**Answer is B**

10) The \_\_\_\_\_ is a built-in function that returns a range object that consists series of integer numbers, which we can iterate using a for loop.

- A. range()
- B. set()
- C. dictionary{ }
- D. None of the mentioned above

**Answer is A**

11) Amongst which of the following is a function which does not have any name?

- A. Del function
- B. Show function
- C. Lambda function
- D. None of the mentioned above

**Answer is C**

12) The module Pickle is used to \_\_\_\_\_.

- A. Serializing Python object structure
- B. De-serializing Python object structure
- C. Both A and B
- D. None of the mentioned above

**Answer is C**

13) Amongst which of the following is / are the method of convert Python objects for writing data in a binary file?

- A. set() method
- B. dump() method
- C. load() method
- D. None of the mentioned above

**Answer is B**

**14)** Amongst which of the following is / are the method used to unpickling data from a binary file?

- A. load()
- B. set() method
- C. dump() method
- D. None of the mentioned above

**Answer is A**

**15)** A text file contains only textual information consisting of\_\_.

- A. Alphabets
- B. Numbers
- C. Special symbols
- D. All of the mentioned above

**Answer is D**

**16)** Which Python code could replace the ellipsis (...) below to get the following output? (Select all that apply.)

```
captains = {
```

```
    "Enterprise": "Picard",
```

```
    "Voyager": "Janeway",
```

```
    "Defiant": "Sisko",
```

```
}
```

```
Enterprise Picard,
```

```
    Voyager Janeway
```

```
    Defiant Sisko
```

- a. 

```
for ship, captain in captains.items():  
  
    print(ship, captain)
```
- b. 

```
for ship in captains:  
  
    print(ship,  
    captains[ship])
```
- c. 

```
for ship in captains:  
  
    print(ship, captains)
```
- d. both a and b

**Answer is D**

17) Which of the following lines of code will create an empty dictionary named `captains`?

- e) `captains = {dict}`
- f) `type(captains)`
- g) `captains.dict()`
- h) `captains = {}`

**Answer is D**

18) Now you have your empty dictionary named `captains`. It's time to add some data!

Specifically, you want to add the key-value pairs `"Enterprise": "Picard"`, `"Voyager": "Janeway"`, and `"Defiant": "Sisko"`.

Which of the following code snippets will successfully add these key-value pairs to the existing `captains` dictionary?

- a) `captains{"Enterprise" = "Picard"}`

`captains{"Voyager" = "Janeway"}`

`captains{"Defiant" = "Sisko"}`

- b) `captains["Enterprise"] = "Picard"`

`captains["Voyager"] = "Janeway"`

`captains["Defiant"] = "Sisko"`

- c) `captains = {`

`"Enterprise": "Picard",`

`"Voyager": "Janeway",`

`"Defiant": "Sisko",`

`}`

- d) None of the above

**Answer is C**

19 ) You're really building out the Federation Starfleet now! Here's what you have:

```
captains = {  
    "Enterprise": "Picard",  
    "Voyager": "Janeway",  
    "Defiant": "Sisko",  
    "Discovery": "unknown",
```

}Now, say you want to display the ship and captain names contained in the dictionary, but you also want to provide some additional context. How could you do it?

- a) for item in captains.items():  
    print(f"The [ship] is captained by [captain].")
- b) for ship, captain in captains.items():  
    print(f"The {ship} is captained by {captain}.")
- c) for captain, ship in captains.items():  
    print(f"The {ship} is captained by {captain}.")
- d) All are correct

**Answer is B**

20 ) You've created a dictionary, added data, checked for the existence of keys, and iterated over it with a for loop. Now you're ready to delete a key from this dictionary:

```
captains = {  
    "Enterprise": "Picard",  
    "Voyager": "Janeway",  
    "Defiant": "Sisko",  
    "Discovery": "unknown",  
}
```

What statement will remove the entry for the key "Discovery"?

- a) `del captains`
- b) `captains.remove()`
- c) `del captains["Discovery"]`
- d) `captains["Discovery"].pop()`

**Answer is D**
